## Executive Summary

This report identifies chemicals that exceeded Emergency Planning and Community Right-to-know Act (EPCRA) Sections 311 and 312 reporting thresholds at the Naval Air Station (NAS) at Corpus Christi, Texas during calendar year (CY) 2013, and documents the data, rationale, and assumptions used to perform the threshold evaluations. Tier II Emergency and Hazardous Chemical Inventory Forms (Tier II Forms) are also included.

NAS Corpus Christi supports the Navy pilot training program and trains Navy, Marine Corps, Coast Guard, and foreign student pilots. NAS Corpus Christi also is home to the Corpus Christi Army Depot (CCAD), an industrial facility that is the primary aviation depot maintenance site for Department of Defense (DoD) rotary wing aircraft. Other tenants at NAS Corpus Christi include the Coast Guard and Customs and Border Protection.

EPCRA Sections 311 and 312 include the United States Environmental Protection Agency (EPA) requirements for reporting hazardous chemical storage. Chemicals that exceed applicable reporting thresholds during a given CY must be documented on Tier II Forms that must be submitted on or before March 1 of the following CY. DoD policy requires installations, to the extent permitted by law, to comply with the provisions of EPCRA regulations.

Data on hazardous material inventory maintained by the Hazardous Materials Minimization Center was obtained from the Navy's Enterprise Resource Planning (ERP) database. Additional data on hazardous material managed by the CCAD was obtained from the Army's Hazardous Material Management System database. NAS and CCAD personnel provided data on bulk fuels and other hazardous material not tracked through the ERP database. The hazardous material inventory was converted to a chemical inventory by referring to Material Safety Data Sheets for the hazardous materials and the total amount of each chemical or hazardous material on site was compared to applicable EPCRA Section 312 reporting thresholds.

Thirty-nine chemicals exceeded reporting thresholds based on the maximum amount of non-exempt chemicals maintained on site at NAS Corpus Christi during CY 2013. This includes the following nine extremely hazardous substances (EHSs) that exceeded their applicable EPCRA Section 312 reporting thresholds: 1,2-ethanediamine, ammonia, cadmium oxide, chlorine, hydroxybenzene, nitric acid, potassium cyanide, sodium cyanide, and sulfuric acid.

Tier II Forms have been provided to NAS Corpus Christi along with ".t2s" files from the EPA's Tier2Submit software for submission to the state of Texas. EPCRA Sections 302 and 303 Emergency Planning Notification Form and Facility Representative Designation Form will not be filed for CY 2013 because no new EHS chemicals were found on site. All EPCRA Section 312 documentation should be maintained on site for a minimum of 5 years.

THIS PAGE INTENTIONALLY LEFT BLANK

## 1.0 INTRODUCTION

This report documents the approach, rationale, and assumptions used to identify chemicals that are reportable under Emergency Planning and Community Right-to-know Act (EPCRA) Sections 311 and 312 at Naval Air Station (NAS) Corpus Christi during calendar year (CY) 2013. Supporting documentation, including a threshold evaluation summary, and hazardous material and chemical inventory summaries are included in Appendices A and B, respectively. Copies of the Emergency and Hazardous Chemical Inventory Tier II Forms (Tier II Forms) for NAS Corpus Christi are included in Appendix C.

EPCRA Sections 311 and 312 include United States Environmental Protection Agency (EPA) requirements for reporting hazardous chemical storage. EPCRA Section 311 requires facilities that store hazardous material exceeding certain threshold quantities to submit copies of their Material Safety Data Sheets (MSDSs) and/or Safety Data Sheets (SDSs) or a list of the hazardous chemicals to the State Emergency Response Commission (SERC), the Local Emergency Planning Committee (LEPC), and the local Fire Department. The threshold quantities for EPCRA Section 311 compliance reporting are defined under EPCRA Section 312.

EPCRA Section 312 requires facilities to identify all hazardous material that were present on site in quantities in excess of 10,000 pounds at any one time during the CY. In addition, facilities are required to identify all extremely hazardous substances (EHSs) listed within EPCRA Section 312 regulations that were present on site at any one time during the CY in quantities in excess of 500 pounds or the Threshold Planning Quantity (TPQ), whichever is lower. Chemicals that exceed EPCRA Section 312 reporting thresholds during a given CY must be documented on Tier II Forms and submitted to the SERC, the LEPC, and the local Fire Department on or before March 1 of the following CY.

THIS PAGE INTENTIONALLY LEFT BLANK

## 2.0 OVERVIEW OF PROCEDURES AND PRIMARY DATA SOURCES

A site visit to support EPCRA Section 311/312 reporting was conducted during the week of 28 October 2013. During the site visit, a plan of action was discussed to complete the necessary data collection and key facility personnel were interviewed including personnel from Environmental, the Hazardous Materials Minimization (HAZMIN) Center, Corpus Christi Army Depot (CCAD), and other tenants. Subsequently, follow-up data was provided by NAS Corpus Christi and CCAD personnel via email.

The primary sources of hazardous material and chemical inventory data include the following:

- The HAZMIN Center is responsible for supplying the majority of hazardous material to the Navy and some tenant activities at NAS Corpus Christi. HAZMIN Center personnel track hazardous material purchases through the Navy's Enterprise Resource Planning (ERP) database including hazardous material container issues and returns, current hazardous material inventory, and chemical composition data for each material. An initial download of data from the NAS Corpus Christi ERP database for CY 2013 was obtained from HAZMIN Center personnel on 31 October 2013. Following discussions with the NAS Corpus Christi ERP database administrator during the site visit, a second download of ERP data was obtained on 15 January 2014.
- The HAZMIN Center does not track hazardous material used by CCAD facilities. CCAD personnel use the Hazardous Material Management System (HMMS) software to manage and track all hazardous material use. An initial download of HMMS inventory data was provided by CCAD personnel on 11 October 2013, and a second download was provided on 16 January 2014.
- Some hazardous material at NAS Corpus Christi is not tracked through the ERP or HMMS databases. This includes bulk fuels, fire suppression chemicals, compressed gases, and lead-acid batteries. In addition, hazardous material stored in bulk vats and other process equipment in CCAD shops is not tracked through HMMS. Inventory data for these materials were obtained from the organizations responsible for maintaining and/or tracking these materials.
- MSDSs and/or SDSs were obtained from organizations and personnel responsible for maintaining the hazardous material, and from publicly available sources.

Where product MSDSs and/or SDSs were available, chemical constituents of each hazardous material were identified using the Chemical Abstracts Service (CAS) Number. Quantities of each chemical, as contributed by various hazardous materials, were then summed to determine the total amount of each chemical stored on site. Where individual chemical constituents of hazardous material could not be identified, the hazardous material was reported as a mixture and

quantities of that hazardous material were summed from all available sources. The total for each chemical or hazardous material was then compared to applicable EPCRA Section 312 reporting thresholds. Section 3.0 discusses threshold evaluations in greater detail. Exemptions were evaluated for chemicals and hazardous material that approached or exceeded reporting thresholds, and were applied as appropriate. Section 4.0 describes the exemptions that were applied.

### **3.0 CHEMICAL INVENTORY DATA FOR NAS CORPUS CHRISTI**

As discussed in Section 2.0, hazardous material inventory data from a variety of sources were used to conduct threshold evaluations for determining EPCRA Section 312 reporting eligibility at NAS Corpus Christi. The various sources of hazardous material data are discussed in detail below, along with a summary of threshold quantities contributed by each source.

#### **3.1 ERP Chemical Inventory Data**

The HAZMIN Center is responsible for receiving, storing, distributing, and tracking the bulk of hazardous material, and is the principle organization responsible for implementing the Navy's Consolidated Hazardous Material Reutilization and Inventory Management Program (CHRIMP) at NAS Corpus Christi.

All hazardous material transactions between the HAZMIN Center and organizations on the installation are tracked through the ERP system. Transactions are performed on a container basis. Data tables within the ERP system are populated with information on each hazardous material including container size, material specific gravity, and chemical composition. Container transactions can be converted into mass and chemical mass transactions and provide a means to calculate individual chemical usage by organization. ERP inventory functions allow calculation of chemical quantities by location.

The ERP Chemical Inventory Report was used to estimate the maximum quantity for each hazardous material present on site and the storage location for each hazardous material at NAS Corpus Christi during CY 2013. The estimate was based on a snapshot daily inventory recorded on 15 January 2014. Based on CHRIMP practices followed at NAS Corpus Christi, this snapshot was assumed to be representative of the hazardous material inventory maintained on the installation during CY 2013.

#### **3.2 HMMS Chemical Inventory Data**

CCAD Environmental is responsible for tracking hazardous material purchased and used at CCAD shops. All hazardous material transactions between the HAZMIN Center and organizations on the installation are tracked through the HMMS database. Similar to the ERP system, transactions are performed on a container basis and information on each hazardous material including container size, material specific gravity, and chemical composition is available. An HMMS chemical inventory report was used to estimate the maximum quantity for each hazardous material present on site and the storage location for each hazardous material in use at CCAD during CY 2013. The estimate was based on a snapshot daily inventory recorded on 16 January 2014. Based on hazardous material management practices at CCAD, this snapshot

was assumed to be representative of the hazardous material inventory maintained on the installation during CY 2013.

### **3.3 Process Chemicals in CCAD Shops**

A number of process chemicals are stored in vats and other process equipment within several CCAD Shops including engine cleaning, bearings, plating, and airframes. In addition, several chemicals are stored throughout the shops in smaller amounts in storage containers and parts washers. The quantities of these materials are not tracked through HMMS and were determined through discussions with CCAD shop personnel and by reviewing available documentation such as tank lists and process diagrams.

### **3.4 Bulk Petroleum, Oil, and Lubricant (POL) Storage**

POLs are stored in various locations throughout NAS Corpus Christi in bulk storage tanks. These include diesel fuel, gasoline, JP-8, and used oil. These materials are not tracked in the ERP system or HMMS. A storage tank inventory was obtained from the NAS Corpus Christi Environmental Department to calculate the stored amounts of these materials. It was conservatively assumed that the maximum amount of hazardous material on site at any time during CY 2013 was equal to the maximum storage capacity for that product.

Although fuels are typically comprised of a variety of chemical components, the fuels used at NAS Corpus Christi have their own unique CAS number and have been reported as unique chemicals for purposes of EPCRA Section 312. Used oil does not have a CAS number and has been reported as a mixture. The weight of each POL or constituent was calculated and added to the weights from other sources.

### **3.5 Fire Suppression Chemical Data**

Information was provided by the Fire Department regarding the storage of aqueous film forming foam, carbon dioxide, ABC dry chemical, Halon 1211, Purple-K, and carbon dioxide fire suppression chemicals at NAS Corpus Christi during CY 2013. Weights of the chemical constituents of firefighting materials were calculated based on available MSDSs and/or SDSs and added to the weights from other sources.

### **3.6 Compressed Gas Inventory**

Compressed gases are stored at various locations at NAS Corpus Christi. CCAD, NAS Corpus Christi, and Defense Logistics Agency personnel provided an estimate of the amounts of various compressed gases stored on site during CY 2013. These included oxygen, nitrogen, propane, argon, acetylene, carbon dioxide, helium, and hydrogen. The majority of argon, carbon dioxide, nitrogen, and oxygen are contained in cryogenic storage tanks

associated with CCAD shops, while the other gases are stored in compressed gas cylinders throughout the facility. Weights of each compressed gas were added to the weights from other sources.

### **3.7 Lead-Acid Batteries**

Non-exempt lead-acid batteries are present in multiple locations across the installation. These include batteries used in computer battery backup systems, forklifts, and electric cars. The weights of each battery, and the percentage by weight of lead and sulfuric acid within each battery were determined from MSDSs and/or SDSs provided by the manufacturer. These weights were added to weights calculated from other sources.

### **3.8 Miscellaneous Hazardous Material Inventory**

Sodium hypochlorite and sodium metabisulfite are used at the NAS Corpus Christi wastewater treatment plant and are stored in liquid solution in storage tanks. Chlorine and ammonia gas are used as water treatment chemicals. In addition, several solvent parts washers are maintained in hangars and other locations throughout NAS Corpus Christi.

THIS PAGE INTENTIONALLY LEFT BLANK

## **4.0 DISCUSSION OF EXEMPTIONS**

Various exemptions are available to facilities under EPCRA Section 312 to reduce the burden of compliance with reporting requirements. Chemicals associated with exempt uses are not required to be included in EPCRA Section 312 threshold evaluations or Tier II reporting. Some of the available exemptions, including those related to fertilizer held for sale by a retailer, chemicals used in laboratories, chemicals used in routine agricultural operations, and products regulated by the Food and Drug Administration, are not applicable to NAS Corpus Christi or do not significantly impact threshold calculations; thus, these exemptions are not discussed further. Exemptions that significantly impacted the threshold evaluations and EPCRA Section 312 reporting requirements for NAS Corpus Christi are summarized below.

### **4.1 Consumer-Equivalent/Personal Use Items**

Substances that are present in the same form and concentration as products packaged for distribution and use by the general public are not required to be considered in the EPCRA Section 312 threshold determinations or Tier II reporting. This exemption was applied to a variety of materials including consumer-equivalent batteries, paints, lubricants, coolants, insecticides, small ABC-type fire extinguishers (less than 10-pounds charge), and cleaning compounds as well as products meant for personal use (e.g., hand sanitizers). Large lead-acid batteries, as well as banks of lead-acid batteries connected in series, do not qualify for this exemption; therefore, batteries in power backup systems and large batteries in forklifts and other electric vehicles were not exempted from threshold calculations. In addition, motor oils and hydraulic fluids packaged in 55-gallon drums were not considered to qualify for this exemption.

### **4.2 Solid Manufactured Items**

Substances present as a solid in any manufactured item, such that exposure to the substance does not occur under normal conditions of use, are not required to be considered in the EPCRA Section 312 threshold determinations or Tier II reporting. Per Department of Defense (DoD) policy, small arms ammunition and other munitions end items were considered to be solid manufactured items and were exempted. Sealed dry chemistry batteries used in communications equipment also qualify for this exemption and were excluded from threshold calculations. Lead-acid batteries including sealed valve-regulated and gel type batteries were not considered to qualify for this exemption.

### **4.3 Research Laboratory/Medical Facility Exemption**

Chemicals used in a research laboratory or a hospital or other medical facility under the direct supervision of a technically qualified individual are exempt from EPCRA Section 312 reporting requirements. Bulk amounts of such chemicals stored at the facility are also exempt from

reporting requirements as long as they are used for medical purposes, even if the actual storage is supervised by non-medical personnel. As a result of this exemption, certain hazardous chemicals stored at the Naval Branch Health Clinic Corpus Christi were excluded from threshold calculations. For example, compressed gases used for medical purposes, including bulk storage tanks, would be exempt. However, bulk fuel storage was not exempted since the fuels are not used for medical purposes.

#### **4.4 Fuels at a Retail Gas Station**

Retail gas stations, which sell fuel to privately-owned vehicles, are exempt from EPCRA Section 312 reporting requirements if the following conditions are met:

- Less than 75,000 gallons of gasoline (all grades combined) are stored;
- Less than 100,000 gallons of diesel (all grades combined) are stored;
- Fuel storage is entirely underground; and
- The facility is in full compliance with underground storage tank regulations.

Per Navy EPCRA guidance, Navy Exchange gas stations qualified for this exemption since they provide fuel to privately-owned vehicles. Fueling points that service only government vehicles do not qualify for the exemption.

#### **4.5 Resource Conservation and Recovery Act (RCRA)-Regulated Hazardous Wastes**

Hazardous wastes regulated under RCRA are exempt from Occupational Safety and Health Administration's Hazard Communication Standards and, thus, do not have to be reported under EPCRA Section 312. Hazardous wastes stored on site at satellite accumulation points and 90-day storage sites were exempted from reporting. Note that used oil that is intended to be recycled is excluded from the definition of hazardous waste; therefore, this exemption was not applied to used oil.

## 5.0 EPCRA SECTION 312 THRESHOLD EVALUATION AND RESULTS

A threshold evaluation summary was compiled based on material and chemical inventory data. The data were summed by CAS number, where possible, for each hazardous chemical stored at NAS Corpus Christi during CY 2013. Total inventory quantities for each chemical were compared to the 10,000-pound hazardous chemical threshold and to the 500-pounds or lower TPQ threshold for EHSs, as applicable.

The following chemicals exceeded reporting thresholds at NAS Corpus Christi in CY 2013:

Chemical Name	CAS Number	Total Weight (pounds)	Threshold (pounds)
1,2-ETHANEDIAMINE	107-15-3	1,075	500 (EHS)
1-BROMOPROPANE	106-94-5	37,445	10,000
1-METHYL-2-PYRROLIDINONE	872-50-4	45,187	10,000
2-AMINOETHANOL	141-43-5	12,696	10,000
AMMONIA	7664-41-7	630	500 (EHS)
ARGON	7440-37-1	29,321	10,000
BENZENEMETHANOL	100-51-6	14,100	10,000
CADMIUM OXIDE	1306-19-0	1,383	100 (EHS)
CARBON DIOXIDE	124-38-9	61,913	10,000
CHLORINE	7782-50-5	1,500	100 (EHS)
CHROMIC ACID	7738-94-5	11,577	10,000
DIESEL FUEL	68476-34-6	221,419	10,000
DIETHYLENE GLYCOL MONOBUTYLETHER	112-34-5	50,858	10,000
GASOLINE	8006-61-9	46,856	10,000
HALON 1211	353-59-3	18,450	10,000
HYDROTREATED KEROSENE	64742-47-8	19,625	10,000
HYDROTREATED MIDDLE PETROLEUM DISTILLATE	64742-46-7	27,572	10,000
HYDROXYBENZENE	108-95-2	1,476	500 (EHS)
ISOPROPANOL	67-63-0	86,898	10,000
KEROSENE (JP-8)	8008-20-6	4,104,857	10,000
LEAD	7439-92-1	159,847	10,000
METHYL ETHYL KETONE	78-93-3	14,991	10,000
METHYLBENZENE	108-88-3	10,495	10,000
MILD HEAVY PARAFFINIC MINERAL OIL	64742-54-7	16,514	10,000
NITRIC ACID	7697-37-2	17,344	500 (EHS)
NITROGEN	7727-37-9	148,886	10,000
OXYGEN	7782-44-7	51,240	10,000
PETROLEUM DISTILLATE, ALIPHATIC, MINERAL SPIRITS	64742-48-9	48,965	10,000
POTASSIUM CYANIDE	151-50-8	577	100 (EHS)
POTASSIUM NITRATE	7757-79-1	15,000	10,000
PROPANE	74-98-6	30,735	10,000
SEVERELY HYDROTREATED LIGHT NAPHTHENIC OIL	64742-53-6	26,630	10,000
SODIUM BISULFITE	7631-90-5	10,545	10,000

<b>Chemical Name</b>	<b>CAS Number</b>	<b>Total Weight (pounds)</b>	<b>Threshold (pounds)</b>
SODIUM CYANIDE	143-33-9	2,658	100 (EHS)
SODIUM HYDROXIDE	1310-73-2	49,831	10,000
SODIUM NITRITE	7632-00-0	21,055	10,000
STODDARD SOLVENT	8052-41-3	46,941	10,000
SULFURIC ACID	7664-93-9	65,216	500 (EHS)
USED OIL	N/A	50,469	10,000

A total of 36 chemicals were reportable for CY 2012. The following chemicals exceeded reporting thresholds in CY 2013, but not in CY 2012: 2-amino ethanol, benzenemethanol, hydroxybenzene, and methylbenzene. Solvent dewaxed heavy paraffinic oil exceeded reporting thresholds in CY 2012, but not in CY 2013. These changes can be attributed to normal operating changes in CCAD hazardous material inventory as tracked and reported through the HMMS database.

A total of 36 chemicals were reportable for CY 2011. The following chemicals exceeded reporting thresholds in CY 2011, but not in CY 2013: hydrochloric acid and hydrogen fluoride (EHS, 100-pound threshold).

A total of 35 chemicals were reportable for CY 2010. The following chemicals exceeded reporting thresholds in CY 2011, but not in CY 2013: VM&P naphtha rule 66, sodium hypochlorite, propylene glycol monomethyl, methyl isobutyl ketone, sodium sulfate, and selenious acid.

A total of 35 chemicals were reportable for CY 2009. The following chemicals exceeded reporting thresholds in CY 2011, but not in CY 2013: polyalphaolefins, fibrous glass, aluminum oxide, and manganese oxide.

## 6.0 CONCLUSIONS

Based on the information obtained from the chemical inventory, the maximum quantities of the following chemicals and hazardous materials exceeded their respective EPCRA Section 312 reporting thresholds at NAS Corpus Christi for CY 2013:

- 1,2-Ethanediamine
- 1-Bromopropane
- 1-Methyl-2-Pyrrolidinone
- 2-Aminoethanol
- Ammonia
- Argon
- Benzenemethanol
- Cadmium Oxide
- Carbon Dioxide
- Chlorine
- Chromic Acid
- Diesel Fuel
- Diethylene Glycol Monobutyl Ether
- Gasoline
- Halon 1211
- Hydrotreated Kerosene
- Hydrotreated Middle Petroleum Distillate
- Hydroxybenzene
- Isopropanol
- Kerosene (JP-8)
- Lead
- Methyl Ethyl Ketone
- Methylbenzene
- Mild Heavy Paraffinic Mineral Oil
- Nitric Acid
- Nitrogen
- Oxygen
- Petroleum Distillate, Aliphatic, Mineral Spirits
- Potassium Cyanide
- Potassium Nitrate
- Propane
- Severely Hydrotreated Light Naphthenic Oil
- Sodium Bisulfite
- Sodium Cyanide
- Sodium Hydroxide
- Sodium Nitrite
- Stoddard Solvent
- Sulfuric Acid
- Used Oil

Tier II Forms have been prepared for these chemicals and have been provided to NAS Corpus Christi, along with “.t2s” files from the EPA’s Tier2Submit software for submission to the state of Texas.

This document should be maintained on site to document compliance with EPCRA Sections 311 and 312. DoD policy requires installations to maintain applicable EPCRA documentation for a minimum of 5 years.

CHEMICAL DESCRIPTIONS:

Tier Two  
Emergency and Hazardous Chemical Inventory  
Specific Information by Chemical

Reporting Period: January 1 to December 31, 2013

Page 2

Printed: February 20, 2014

Facility Name: NAVAL AIR STATION, CORPUS CHRISTI

CHEM NAME: 1-BROMOPROPANE

CAS: 106-94-5

Identical to previous year

TRADE SECRET

Pure  Mix  Solid  Liquid  Gas  EHS

PHYSICAL & HEALTH HAZARDS:

Fire  Sudden Release of Pressure  Reactivity  Immediate (acute)  Delayed (chronic)

INVENTORY:

Below Reporting Thresholds

Max Amt: 37445 pounds Max Daily Amt code: 07 (25,000 - 49,999 pounds)

Avg Daily Amt code: 07 (25,000 - 49,999 pounds)

Max quantity in largest container: 6605 pounds

No. of days on-site: 365

STORAGE CODES & STORAGE LOCATIONS:

Confidential

Container Type: Tank inside building Pressure: Ambient pressure Temp: Ambient temperature Location: CCAD

Engine Shop, CCAD Plating Shop Amount: pounds

Container Type: Steel Drum Pressure: Ambient pressure Temp: Ambient temperature Location: CCAD

Building/Hangar - 8, 353 Amount: pounds

Container Type: Can Pressure: Ambient pressure Temp: Ambient temperature Location: CCAD Building/Hangar - 357

Amount: pounds

CHEMICALS IN INVENTORY STATE FIELDS:

No additional chemical information is required by Texas

CHEM NAME: 1-METHYL-2-PYRROLIDONE

CAS: 872-50-4

Identical to previous year

TRADE SECRET

Pure  Mix  Solid  Liquid  Gas  EHS

PHYSICAL & HEALTH HAZARDS:

Fire  Sudden Release of Pressure  Reactivity  Immediate (acute)  Delayed (chronic)

INVENTORY:

Below Reporting Thresholds

Max Amt: 45187 pounds Max Daily Amt code: 07 (25,000 - 49,999 pounds)

Avg Daily Amt code: 07 (25,000 - 49,999 pounds)

Max quantity in largest container: 26271 pounds

No. of days on-site: 365

STORAGE CODES & STORAGE LOCATIONS:

Confidential

Container Type: Tank inside building Pressure: Ambient pressure Temp: Ambient temperature Location: CCAD

Engine Shop Amount: pounds

Container Type: Can Pressure: Ambient pressure Temp: Ambient temperature Location: Building/Hangar - 42, 50,

56, 8, 890 Amount: pounds

Container Type: Plastic or non-metallic drum Pressure: Ambient pressure Temp: Ambient temperature Location:

CCAD Building/Hangar - 8 Amount: pounds

Container Type: Can Pressure: Ambient pressure Temp: Ambient temperature Location: CCAD Building/Hangar - 8,

340, 341, 360, 360A, 1880 Amount: pounds

Container Type: Plastic bottles or jugs Pressure: Ambient pressure Temp: Ambient temperature Location: CCAD

Building/Hangar - 49, 98, 360C Amount: pounds

CHEMICALS IN INVENTORY STATE FIELDS:

Tier Two  
Emergency and Hazardous Chemical Inventory  
Specific Information by Chemical

Reporting Period: January 1 to December 31, 2013

Page 3

Printed: February 20, 2014

Facility Name: NAVAL AIR STATION, CORPUS CHRISTI

No additional chemical information is required by Texas

CHEM NAME: 1,2-ETHANEDIAMINE

CAS: 107-15-3

Identical to previous year

TRADE SECRET

Pure  Mix  Solid  Liquid  Gas  EHS

PHYSICAL & HEALTH HAZARDS:

Fire  Sudden Release of Pressure  Reactivity  Immediate (acute)  Delayed (chronic)

INVENTORY:

Below Reporting Thresholds

Max Amt: 1075 pounds Max Daily Amt code: 04 (1,000 - 4,999 pounds)

Avg Daily Amt code: 04 (1,000 - 4,999 pounds)

Max quantity in largest container: 920 pounds

No. of days on-site: 365

STORAGE CODES & STORAGE LOCATIONS:

Confidential

Container Type: Plastic bottles or jugs Pressure: Ambient pressure Temp: Ambient temperature Location: CCAD

Building/Hangar - 49, 245, 340, 359, 356A Amount: pounds

CHEMICALS IN INVENTORY STATE FIELDS:

No additional chemical information is required by Texas

CHEM NAME: 2-AMINOETHANOL

CAS: 141-43-5

Identical to previous year

TRADE SECRET

Pure  Mix  Solid  Liquid  Gas  EHS

PHYSICAL & HEALTH HAZARDS:

Fire  Sudden Release of Pressure  Reactivity  Immediate (acute)  Delayed (chronic)

INVENTORY:

Below Reporting Thresholds

Max Amt: 12696 pounds Max Daily Amt code: 06 (10,000 - 24,999 pounds)

Avg Daily Amt code: 06 (10,000 - 24,999 pounds)

Max quantity in largest container: 7506 pounds

No. of days on-site: 365

STORAGE CODES & STORAGE LOCATIONS:

Confidential

Container Type: Tank inside building Pressure: Ambient pressure Temp: Ambient temperature Location: CCAD

Engine Cleaning Shop Amount: pounds

Container Type: Can Pressure: Ambient pressure Temp: Ambient temperature Location: Ubiquitous in various

products throughout facility Amount: pounds

CHEMICALS IN INVENTORY STATE FIELDS:

No additional chemical information is required by Texas

CHEM NAME: AMMONIA

CAS: 7664-41-7

Identical to previous year

TRADE SECRET

Pure  Mix  Solid  Liquid  Gas  EHS

Tier Two  
Emergency and Hazardous Chemical Inventory  
Specific Information by Chemical

Reporting Period: January 1 to December 31, 2013
